Andalucía Aerospace

Who are we?

Andalucía Aerospace Cluster is a private association created to represent all the aerospace companies of Andalusia.

Our members belong exclusively to the private sector and although we gather a considerable amount of companies our goal is to keep growing.

Our mission

Strengthening the local companies
as a cluster in the aerospace
market

Promoting synergies between our
members

**Fostering technological
development** inside the industry

**Helping our members reinforce their
international presence**

Providing qualifying & training for
the industry workers

Institutional representation on
behalf of the local companies

Our members' capabilities

A view from the wing of a white aircraft looking forward over a runway towards a cloudy sky. The wing and tail of the aircraft are visible in the foreground, and the runway stretches out ahead. The sky is filled with soft, white clouds.

Catalog

Aciturri is a supplier of OEM's (Airbus, Embraer, Boeing) and large Tier 1's with the capacity to conceive, design, develop, certify, manufacture, assemble, deliver on the Final Assembly Line (FAL) and offer a service of customer service in a competitive and long-term manner. In addition, it has the capacity to manage and transfer off-set packages anywhere in the world, developing optimization projects, design and process improvements, as well as cost reduction.

Aciturri participates, among others, in the most relevant programs of Airbus, Embraer, Boeing and Dassault Aviation. Its core business is the manufacture of composite aerostructures, developing projects for engineering design, development, manufacturing and product support of complex aerostructures. It uses the following technologies: Automated Fiber Placement (AFP), Automated Fiber Lay-up (FLU), Automated Tape Lay-up (ATL), Hand Lay up, RTM y LRI.

Main activities

Support activities

At the FAL in Toulouse for the A350 XWB program; at Saint Nazaire for A350 XWB/A330; at the FAL in Sevilla and the Maestranza Aérea de Sevilla for A400M; at the A330MRTT conversion in Getafe; and at Airbus Canada FAL at Mirabel.

Commercial development of MRO, Services and Training activities

with both civilian and military clients, which led to the EASA certifications Part-145 as an approved aeronautical maintenance company, and EN9110 as a certified aeronautical maintenance management company.

Aernnova is a global aerostructures company providing **integrated management of aircraft large sections and assemblies** (metallic, kevlar, glass fibre and carbon.) Also, Aernnova **provides engineering services, metallic and composite parts as well as repair and product support servicing.**

Aernnova's main objective is to ensure customer satisfaction by meeting deadlines and profitability guarantee.

Aernnova designs and/or manufactures aerostructures for more than 20 programmes for the world's leading manufacturers **(OEM).**

Main activities

Design and manufacture of aerostructures (composite and metallic)

Wings / Fuselage sections / Empennages / Secondary structures.

Product engineering

Conceptual and preliminary design and calculation / Detail design and calculation / Testing and certification / Support services.

Process engineering

Aerostructure assembling and handling systems / Machinery for composite components / Manufacturing / Conventional jigs and tools.

Other activities

Composites

ATL Technology / HLU Technology / RTM and infusion / Filament winding.

Metallic components

Machined parts / Surface treatments / Sheet metal parts.

Product support

Spare parts / Technical support / Repair service - MRO / Support during product development.

Programmes

Airbus A320 / A330 / A350 XWB / A380 / A400M / A220 / **Airbus Helicopters** Tiger / NH90 / **Boeing** B737 / B777 / B787 / **Embraer** ERJ145 & E170 / E175 / E190 / KC-390 / **Eurofighter** / **Sikorsky** S-92

AeroIntellis

AeroIntellis provides system safety, systems engineering and life cycle engineering services for organisations developing or operating complex, safety-critical systems. It brings more than two decades of capability in aerospace.

The company supports clients throughout the system life cycle - from early research and technology exploration to new product introduction, certification and in-service operations. Its aerospace expertise spans CS-25 large aircraft, CS-23 commuter platforms, CS-27/CS-29 Small/Large Rotorcraft, CS-E engines, and hybrid-electric propulsion architectures developed under SC E-19.

Activities/Services

System Safety Engineering

- Analysis work packages – based on ARP4761 & ARP4754
- Process design
- Decision support
- Analysis/report reviews
- Independent evaluation of safety assessment progress vs. project status
- Design gate audits
- CVE roles
- Training on safety methodologies

Other areas of support

- Systems Engineering / Requirements Management
- Project / Programme Management
- Reliability, Maintainability, Availability
- Integrated Logistics Support (ILS)
- Design for Service, Failure Modes and Effects Analysis (FMEA)
- Failure Reporting, Analysis and Corrective Action System (FRACAS)
- Testing, Validation & Verification
- Fire Precautions, Ventilation & Drainage

AeroSM, founded in 2019, is an **aerospace and defence consultancy firm for global business strategy and development**.

AeroSM brings a high level of market experience to support companies in the areas of **business strategy, business development and intelligence, national and international contacts** with leading OEMs, Tier 1 and MRO customers, helping companies from the opportunities identification to the development of the offering and its final negotiation.

Main activities

Consultancy

Market access / Alliances with partners and customers / Customers definition / Guide to negotiations / Access to major accounts / Support up to delivery.

Other activities

Search for funding

Search for partners

Support with grants

Search for suppliers

Main activities

MRO

Other activities

Power generation

Integrated Drive Generator (IDG) / APU generator

Hydraulics

Hydraulic pump / Landing gear actuators

Pneumatics

Air cycle machines (ACM) / Mixer/Condensers

Fuel

Fuel control units (FCU) / Fuel pumps

Electronics

Fuel quantity indicators / Audio control panels (ACP)

Programmes

Airbus A220 / A320 / A330 / A350XWB / A330MRTT / A400M / C295 / **Boeing** B737 / B777 / B787 / **Bombardier** CRJ-700 / 900 / 1000 / **Embraer** ERJ145 & E170 / E175 / E190 and several other military programmes.

Certifications

- EASA 145
- FAA 145
- CAA UK 145
- PERAM 145
- ISO 9100/9110
- PECAL 2110
- EASA 21J

AERTEC

AERTEC Solutions is an international **engineering and consultancy** firm specialised in aeronautics, which carries out its activities in **airports, the aeronautical industry, aerospace and defence systems, and RPAS**.

It is a preferred supplier (Tier 1) for manufacturing engineering and programme management services to the Airbus Group for its civil and military aircraft. In Airbus programmes, it participates in the design and development of onboard equipment and systems.

AERTEC Solutions has its own in-house designed and proprietary technology lightweight tactical RPAS, for observation and surveillance applications.

 Málaga

 www.aertecsolutions.com

Main activities

Aerospace Industry

Aircraft design / Facilities and processes design / Manufacturing engineering / Planning production control and coverage / Tooling / Quality services / Test systems engineering / MRO services / Projects and programmes management / Software applications for the aviation industry.

Industrial Digitisation

Technological developments for engineering / Technological developments for production / Smart Testing Network.

Systems

Avionics / Aircraft electrification / Certifiable on-board software / MBSE / GNC systems.

UAS/RPAS

Unmanned Aerial Systems / Ground control systems (GCS) / Mission Systems / UAS simulation environments.

Airport life cycle

Airport consultancy services / Airport planning and design / Operation services / IT systems for airports.

Programmes

Airbus A320 / A330 / A350XWB / A380 / A330 MRTT / A400M / C295 / **Eurofighter** / **Airbus Helicopters** Tiger / NH90 / **Ariane** / **ESA**

Certifications

- ISO 9001
- ISO 14001
- ISO 45001

Aerospace Engineering Solutions (AES), holds a Level 2A EASA Part 21J Approval (EASA.21J.722) and GCAA (DOA/181) Part 21 Design Organisation Approval (DOA).

For over 20 years, **AES** has been at the forefront of integrated aerospace design and certification engineering services, delivering projects ranging from minor engineering changes to full aircraft retrofits for leading airlines, aircraft leasing companies, MROs and OEMs. Headquartered in Braintree, Essex, with satellite offices in Ireland (Shannon) and Spain (Málaga), AES has developed over 3000 modifications and Supplemental Type Certificates (STC) in all aspects of cabin interior, aircraft transitions, exterior, structural and avionics changes for commercial passenger and private aircraft. Within its scope of approval, AES is capable of develop minor and major modifications and repairs to large and small aeroplanes and helicopters cabin safety, structures, avionics and electrical systems & Software RTCA/DO-178C Level E.

Main activities

Modifications and Repairs of Aeronautical Structures (primary and secondary)

- Seat installation and refurbishment, galleys, carpets, overhead compartments, furniture refurbishment
- Redesign and Repair of cabin elements
- Livery and Placards design
- Certification Services for aeronautical components
- MRO Services - Weight and Balance reports

Customized EASA regulations, Part 21 & 145 Training courses

Consultancy services for EASA Part 21 & Part 145 organisations

Modifications and Upgrades of avionic and electrical components

- Installation of radios VHF/HF, TCAS, FDR, CVR, EGPWS, etc.
- Installation of WIFI, In Flight Entertainment System, USB Chargers
- System Reprogramming
- Certification Services DDPs and Software Level E
- Test: Ground, EMI/EMC and Flight
- MRO Services - Electrical Load Analysis and Entry into Service (EIS)

- GCAA - Civil Aviation Authority of the United Arab Emirates - DOA/181
- ISO 9001:2015

Airgrup is a company focused on manufacturing components for the **aerospace and defence industries**. For more than 75 years, Airgrup has been **committed to three key factors: quality, delivery reliability and management transparency**.

Airgrup is a benchmark in the manufacture of highly complex **welded pipes and ducts, machining** of large structural components and electrical harnesses and modules, with strong engineering capabilities including design, industrialization and manufacturing engineering.

A fully **digitalized** company offering real-time traceability along the whole production cycle, including inhouse capabilities for surface treatments, painting, non-destructive testing, equipping or assembly.

Main activities

Piping and ducting systems

Simple bended tubes / Complex welded ducts and assemblies.

Structural machining and assembly

Electro-mechanical modules

Electrical harnesses / Integration of racks, boxes and equipments.

Other activities

Surface treatments and painting

Aeronautical assembly and equipping

Non-destructive testing (penetrant inspections, magnetic particle and x-ray inspection)

Engineering & design

On-site installation services

Laboratory and calibration services

Akkodis is the solution for companies that seek excellence in support throughout the entire life cycle of their projects. With an experience of more than 30 years in the aerospace and defence sector, its team of experts is present in all phases of **engineering**, from design and development to **certification, validation and manufacturing**.

Akkodis also offers a comprehensive and personalized operation support service, which includes the maintenance and development of **technical publications**, among other activities. But what sets the company apart is its innovative vocation and its commitment to excellence in customer service. Akkodis combines technical knowledge with the latest advances in digitization to offer unique, efficient and sustainable solutions.

Main activities

Systems Engineering and V&V	RAMS
Certification	Manufacturing, supply chain & quality
High Integrity SW and Digitalization	R&T

ALTEN is a company led by a team of top-level professionals that strives to meet the needs of the aeronautical, defence and space sectors that require cutting-edge technological services.

In manufacturing and assembly, **ALTEN participates in highly successful civil aeronautical programmes**, including Airbus A320 and A350 and Boeing B777, and cutting-edge military programmes such as Airbus Defence A400M and A300MRTT.

The airline industry relies on ALTEN to obtain air carrier certificates, operating licenses or aerial work permits. The company also provides management and control systems for airport services.

Main activities

Engineering & Certification

Consulting services (manufacturing drawings, installation drawings, machining, sheet metal, composite, analysis and simulation and project management). Systems' Engineering / Minor and major modifications with EASA, FAA or other National Authorities / DOA, MOA, POA & CAMO support / Continuous Airworthiness management / Aircraft Documentation management and update / Manufacturing Engineering / MRO Engineering / Industrialization. Industrial means design & integration / Configuration control. Work and TIs' preparation / Non-conformities resolution / Functional tests benches / Technical support / KPIs/dashboards creation and management using DEMAT / Digital Transformation and Innovation / Part-145 engineering.

Digital Transformation, Process Optimization and Industry 4.0

Lean Six Sigma methodologies combined with State-Of-The-Art technologies / Agile knowledge / Process optimization. Efficient Operative / Big Data and Analytics / Process standardization / Digital Twins and Simulations / IoT and AI Solutions / ERP, CRM, PLM, MES and PMA Solutions.

ALTER

ALTER TECHNOLOGY is the leading **provider of micro and optoelectronics services in engineering, procurement, assembly, and test in space and harsh environment markets.**

ALTER TECHNOLOGY develops and offers **complete turn-key solutions covering front-end engineering test, wafer and dice probing and final test**, as well as wafer sawing, packaging, and assembly. Their services also extend **to equipment and systems testing and certification in fields like small satellites, drones, security, transport, nuclear, etc.**

The organization works with superior technology, breakthrough innovations, and advanced applications to make its partner's work easier.

Main activities

Electronic components	Autumn Analysis
Provisioning	PCB validation (solder verification)
Packaging and Assembly	Microelectronic and RF Design
Equipment and Electronic Systems	Electronic design
Nanosatellites and Cubesats	Product guarantee
Drones	CE marking
Automotive	Certification
Validation and testing

ATEXIS innovates to enable more sustainable and secure technology for the future of society, helping its customers with the operations and maintenance of complex systems, such as aircraft, ships, or helicopters, from the design phase through to end-of-life or second life. The goal is to make these systems more durable and optimize their lifecycle cost.

ATEXIS, which more than 1,200 employees, is an international company of the ALTEN group, a world leader in engineering and IT services. In Spain, it has more than 450 employees, located at its headquarters in Seville, Madrid and Albacete.

Main activities

Operations

ISS / MRO / Spares Supply / Supply chain.

Maintenance Engineering

RAMS / LSI Engineering.

Training

Training consultancy / E-learning / Customised courses / Content factory: virtual reality, artificial intelligence, augmented reality, 3D modelling, gamification, virtualisation of content and videos.

Technical documentation

Creation / Translation / Technical data management / Publication / Migration and automatization

Aytana is a spin-off of the Cox Group that inherits the talent and projects in defence, hydrogen, aerospace and large scientific facilities (born in the former Abengoa) with an experience of more than 20 years developing defence and hydrogen projects, and 12 years in space activities.

Aytana integrates in-house all the necessary capabilities to cover the complete product development cycle in two work centers in Seville and Madrid and is based on a solid quality/development process that allows the implementation of product development projects and large systems programs, incorporating innovative components with a low technological risk. The company is created with the mission to attract technologies and synergies from sectors of high technological value to develop robust and/or innovative products in the areas of defence, hydrogen and aerospace that cover the new evolving demands of these sectors.

Main activities

Space

Aerostructures assembly, sub-assemblies, equipment

Electrical and electronic materials

Engineering/ Consulting

Testing/Inspection/Metrology

Aerospace services

UAS/UAVs

Other activities

Certifications

- Experienced personnel for testing in space and CE marking installations.
- Experience in external laboratory environmental testing: Vibration and Shock, Thermal Vacuum, EMC, Thermal Cycling, IP, Corrosion, etc.
- Experience in certifications according to space (ECSS, NASA) and military (MIL-STD and DEF-STAN) standards.
- ISO 9001:2015 / ISO 14001:2004 / PCAL-AQAP 2110 for Defence Projects.
- Quality system for space projects based on the ECSS.

CAF provides engineering and multidisciplinary consulting services. The company specializes in developing railway vehicle projects, it has experience in other transport systems and in modernizing them. CAF covers the entire lifecycle of the project.

CAF carries out digital projects, based on digitization and additive manufacturing. It performs reverse engineering, optimization for 3D manufacturing, and finite element simulations of these designs and redesigns. In addition, CAF masters post-processing of additive manufacturing parts and hybrid technologies by combining additive manufacturing with fibre and resin lamination.

CASEMEDIA specializes in **developing and manufacturing customized "technical packaging"**. They provide a diverse range of wooden solutions, including export packaging, palletized and/or demountable options, as well as robust boots and chests designed specifically for the Aerospace Sector.

They incorporate **tailored foam interiors into their packaging**, whether it's their own wooden packaging or standard IP67 cases. With a dedication to achieving a fully personalized service, CASEMEDIA treats each project as their own and utilizes all available resources to deliver optimal solutions.

They hold ISO 9001:2015 certification and offer packaging certified to the "ATA300 Category II" specification for transportation, as well as packaging compliant with "UN" regulations for dangerous goods.

Furthermore, all of their packaging is ISPM15 (International Standards for Phytosanitary Measures No. 15) certified, meeting the necessary requirements for phytosanitary export.

CATEC

The **Advanced Centre for Aerospace Technologies** is a technological centre managed by the Fundación Andaluza para el Desarrollo Aeroespacial (Andalusian foundation for aerospace development).

CATEC facilities cover a total of **4,500 m2**. CATEC currently has a staff of more than 100 employees, mostly doctors and researchers, whose primary qualifications are Engineering, Physical Sciences or Chemistry.

CATEC is built around three main **R&D+i** activities: **materials and processes** (additive manufacturing and testing), **avionics and systems** (UAVs, Internet of things), **automation and robotics**.

CEN Solutions was created In 1994 **to provide services to the electrical industry**, performing its activities in two main business areas: the **manufacturing of Low Voltage and Medium Voltage Switchgears**, and the **industrial services area** to provide complete solutions of electromechanical maintenance in high added value production lines, industry, aerospace sector, and water sector.

The company is located in Seville Free Trade Zone where it has a total area of 37.000m2 and a total human resources of more than 180 people.

As of today, CEN Solutions has an export ration of more than 80% of its production to more than 25 countries.

Activities/Services

System Safety Engineering

- Retrofit of existing regional aircraft
- Conversion of platforms such as Cessna Caravan, Beechcraft King Air, Twin Otter, PC-12 and similar aircraft

Development of electric propulsion systems – DovePower™

- Integrated electric propulsion units designed to replace conventional turboprop engines

Design and development of aviation battery systems – DovePack™

- Modular battery systems with immersion cooling for enhanced safety, energy density and integration

Integration of range-extension systems

- Series-hybrid architectures using turbogenerators, with future evolution toward hydrogen-based solutions

Element Sevilla is a **Nadcap-accredited provider of testing services for materials, structures, components, and systems**. Located in the Aerospace Technology Park of Andalusia, Aerópolis, at the heart of the Andalusian aerospace industry, Element Sevilla is one of the few laboratories in Europe with the capabilities and certifications to perform testing on major components for the global aerospace sector. Additionally, Element Sevilla is a certified Tier 1 supplier by Airbus.

Element offers a wide range of services, including **destructive materials testing, structural testing, and vibration testing**, serving various sectors such as aerospace, space, rail, energy, and naval. Element Sevilla holds Nadcap accreditation for Non-Metallic Materials Testing (NMMT) and Metallic Materials Testing (MTL).

LAMAIGNERE
CARGO

Lamaignere has over **110 years of experience as a global freight forwarder** and has gained the trust of its customers in such key countries as Spain, Chile, Mexico, USA, Korea, Singapore, Vietnam, China, Taiwan, Myanmar, to name a few.

The company offers integrated logistics solutions through its own experts and specialists who have extensive experience in providing services to the aerospace industry. Lamaignere services also develops custom-made solutions for customer-specific projects accommodating all transportation modes.

Mecanizados & Montajes AERONÁUTICOS

M&M Group - Mecanizados y Montajes Aeronáuticos is a business group specialized and referent in the manufacture of metal parts and subassemblies for aerospace use. M&M Group participates in the main aerospace programs of Tier 1 and OEMs in the international market.

The company has the latest technologies for the manufacture of metallic elements (such as the Erie press), as well as for the application of surface and heat treatments.

Furthermore, the experience acquired by our team gives us a degree of specialization in the forming process that is a reference in the sector.

Main activities

End to End aeronautical processes from Raw Materials management to packaging and delivery

Cutting, trimming and drilling sheet metal and plastics by CNC and water jet for steel and titanium. Profile CNC machining

Elastoforming manufacture metallic parts by cold forming-hydraulic press rubber mattress

Cool and hot jooglig

Aluminium profile manufacturing by laminated from roll forming exclusive custom shapes

Manual forming, Bending

CNC machining by sheet metal and extruded profiles stretching

Surface protection, CCC (alodine) TSA type I, passivation, painting

Minor assemblies

Heat Treatments Aluminium alloys (solution and aging HT)

Tooling design and manufacturing by Catia and CNC 3 and 5 axis machining Three dimensional verify

Final inspection, NDT, Hardness and Conductivity, Penetrant inspection

SIAM is the contracted company responsible for the **management of Ryanair's aircraft repair hangar in Seville**. With an investment of over 30 million euros, these state-of-the-art facilities are situated at Seville airport and boast five bays dedicated to simultaneous aircraft maintenance and repair. The initial objective is to service 300 aircraft annually, with plans to expand this number to 600 by 2026.

This 8,000m² hangar in Seville allows maintenance checks to be carried out on Ryanair's entire Boeing 737-800 fleet.

The maintenance intervals for each aircraft are controlled by calendar time or flying hours/cycles. The time committed to these maintenance tasks can vary from a few hours to a few weeks.

Main activities

Heavy Maintenance

- EASA and UK CAA approved Heavy Maintenance facility
- HM on B737NG series aircraft approved

Work shop approval for on wing and off wing repairs on:

- Composites
- Sheet metal

Skylife was born from the University of Seville to create a business model based on knowledge, values and people, standing out in research and development (R&D) with numerous success stories in sectors such as Aerospace and Naval. With more than 100 R&D projects, financed both publicly and privately, and a team of more than 70 highly qualified professionals, Skylife has maintained a sustained growth in its more than 12 years of trajectory, with a clear international perspective and completely national financing.

The company is dedicated to the development of customised solutions and participates in R&D projects, covering areas such as digitalisation, power electronics and avionics and electronics. Its services include the development of digital solutions for Industry 4.0, the manufacture of power converters with high efficiency and reliability, and the creation of integrated and differentiating solutions in avionics and electronics for sectors such as aerospace and navigation.

SOGELAIR aerospace is an **international engineering services** company for the aerospace sector, with more than 1,700 employees worldwide and offices in France, Spain, United Kingdom, Germany, USA, Canada, Tunisia and Morocco.

Its activity is focused on **engineering and product development** in the fields of aerostructures, systems installation, configuration and data management, equipment.

In addition to engineering services, SOGELAIR aerospace provides solutions from development to product commissioning.

	+34 954 275 511 / 665 825 635
	Seville
	www.sogclairaerospace.com

Main activities

Aerostructures (metallic and composite)

Structural design and calculation
/ Modelling and simulation (FEM, MASC).

DOA airworthiness modification (EASA Part 21J)

Systems installation

Electrical (PWP, HTP, VTP), mechanical,
hydraulic, A/C, cabin and interior / Flight Test
Installation (FTI) / MAP and manufacturing
support.

Configuration and data management (CM, CCMD, Quality)

Product and processes identification
/ Technical document, quality and non-
conformity management / Support and
training.

Manufacturing engineering (J&T, ME, CNC)

Equipment

Simulators (hardware) / Test platforms /
Metrology / Space (structure, payloads).

Programmes

Airbus A220 / A320 / A330 / A330 MRTT
/ C295 / A380 / A350 XWB / A400M
/ Embraer KC-390 **/ Dassault** Falcon 7x
/ Bombardier CRJ-700 / 900 / 1000
/ Global 7000

Certifications

- ISO 9001
- EN 9100
- ISO 14001
- ISO 27001

Solar MEMS Technologies (SMT) is an innovative SME specializing in the manufacture of sensors for attitude and orientation control systems used in space and other high-tech industries. This includes sun sensors, star trackers, horizon sensors, and their associated ground support equipment.

SMT has become the world leader in sun sensors for the smallsat industry, with thousands of units in orbit for different customers including Airbus OneWeb Satellites, MAXAR, Thales Alenia Space, OHB, NASA, ESA, CNES, DLR, etc.

It is estimated that approximately 15% of all satellites currently in orbit are equipped with sun sensors developed by SMT.

Main activities

Development of sensors for satellite Attitude Determination and Control Systems (ADCS)

Sun sensors / Star trackers / Horizon sensors.

Development of Ground Support Equipment (EGSE)

OGSE/SCOE.

Engineering services

Custom mechanical and electronic developments / Hardware and software solutions
/ Industrialization applied to the space sector.

Sun-tracking solutions for aeronautical and industrial applications

Solar photovoltaic energy / Unmanned Aerial Vehicles (UAVs) / Automotive.

STUDEC is a provider of Engineering, Consulting and Outsourcing Services in the **Integrated Logistics Support** field with a **technological** and **innovation** approach.

Its activity around **service engineering, technical documentation, and the complete training life cycle** (from training needs analysis to instruction, through the development of training resources) stands out. It operates in most industrial sectors, in particular: **aeronautics, defence, space, naval, rail and energy**.

STUDEC is present in Spain, France, Germany, the United Kingdom, India and Morocco.

Main activities

Technical training

Production of training content / Training delivery & Operations support / Change management strategy / Learning management solutions.

Technical Documentation

Maintenance and operational technical documentation / Civil and military projects / Development of specific technical documentation software.

Management Support

PMO / Customer Assistance / Process improvement / System integration / Quality.

Other activities

Software Development: Production steering tools / Technical data management / Bespoke or offthe-shelf solutions / Data asset management.

Integrated Logistics Support: Logistic Support Analysis / RAMS, FMEA - FMECA / RCM, RCM II, MSG-3 / Maintenance Support & Planning / Spares Management; NATO Codification.

In Service Support: Flight Crew Specialists (pilots, loadmasters, jumpmasters, AROs) / Ground Crew Specialist (MRO, AGE, FSRs, AMO).

Translation & Interpreting: More than 30 languages / Team of more than 50 specialized in-house native translators.

SurAvian School of Aeronautical Technical Professions is a private institution established in Malaga in 1998, dedicated to advancing aeronautical professions in Andalusia. It is approved by the Ministry of Education, Vocational Training, and Sports to offer advanced vocational training in aircraft maintenance and other specialized professions needed by airlines, maintenance companies, handling companies, and aerospace and defence industries.

In the case of aeronautical maintenance, they obtained recognition nº ES.147.005, as a PART-147 Organization, through the European Aviation Safety Agency (EASA), which has allowed the internationalization and professional success of their students. They have a specialized and expert team of instructors with very diverse professional profiles with great professional experience, among which are examiners, practice evaluators and support staff such as: Aeronautical and aerospace engineers and aeronautical maintenance certifying technicians.

Main activities

Specialized in aerospace training at the maximum "Aeronautical Certifications", according to the requirements of the State Aviation Safety Agency (AESA), with a comprehensive approach, both practical and theoretical:

- Technical training certified by the Aviation Safety Agency
- Training to assist passengers, crews, aircraft and goods at airports, assistants for companies and handling companies
- Training programs adapted to the specific needs of the aerospace companies
- Technical skills and specialized knowledge in areas such as structural design, component manufacturing, and aircraft assembly

Certifications

Part 147 Center, authorized by AESA, EASA, Ministry of Education, Vocational Training and Sport and the Ministry of Employment, Enterprise and Self-Employment.

Titania is a company dedicated to **materials testing and research projects** for the industry.

Within its 2,500 m² laboratories, it offers a comprehensive service covering **quality control and processes and materials certification** used in aircraft construction.

In addition to **laboratories**, it has different **pre-industrial scale processes** allowing it to address **technologically complex** projects.

	Fernando Serrano

Main activities

Testing of aeronautical materials: metals, composites, normals, adhesives, sealants and paints. Laboratories:

Mechanical / Microscopy / Physiochemical / Corrosion and climatic / Thermal analyses / Surface and bonding technologies / Non-destructive testing.

Main processes

Composites manufacturing / Surface treatments / Paint application.

Other activities

Participation in R&D+i projects, with strategic lines

Composite materials manufacturing / Surface treatments / Reach.

Programmes

Established in 1982, **Torsesa** has evolved into a trusted partner for the aerospace and defence industries, offering comprehensive solutions in industrial **supplies, tooling, and maintenance services**.

With a strong presence in Spain and international operations in France, Germany, Morocco, and India, Torsesa supports clients throughout the entire lifecycle of their operations.

The company's commitment to innovation, quality, and customer satisfaction positions it as a key player in the aerospace and defence sectors.

Main activities

Tooling, consumables, and customised industrial supply: standard products and tailored tool design and manufacturing.

Integrated industrial services: comprehensive management, machinery maintenance and repair, and compressed air system installation.

In-plant management services: production support, warehouse management, and point-of-use supply.

Automated and comprehensive PPE management: supply systems, regulatory compliance consulting, and integrated safety solutions.

Other activities

Custom Toolkits: Design and implementation of toolkits tailored to specific production processes, enhancing efficiency and reducing downtime.

3D Prototyping of Special Tools: Development of customised tools and fixtures using 3D prototyping to meet unique operational requirements.

Automated Replenishment Dispensers: Installation of smart vending systems for real-time inventory management and on-demand supply of tools and consumables.

Industrial Storage Systems: Custom design and installation of storage systems to optimise space and inventory management.

- ISO 14001:2015 - Environmental Management System

Tratercom is an independent company located in the province of Seville that was born in July 2006 with the firm intention of serving the booming aeronautical sector in a technology traditionally orphaned by specialized traffickers. Based on short delivery times and a personalized treatment with the client, Tratercom was quickly accepted by many companies in the sector as preferred supplier.

The acquisition of new furnaces in 2010 made it possible to extend the scope of certification to new treatments, which meant an increase in workload, with the consequent increase in the number of employees. The highly qualified staff, together with their personal and professional motivation, ensure, in the future, new extensions to the range of processes offered to its clients.

Main activities

Complete service to deliver finished pieces

Pickling and Passivation of Stainless Steels (Dye penetrant and Magnetic particle inspection)

Crack Inspection (Dye penetrant and Magnetic particle inspection)

TRC Aeronáutica is a company with more than 20 years of experience in composite materials, positioned as Tier 2, that offers three different lines of business:

- 1. Carbon**, carrying out post-autoclave operations (trimming, inspection, ultrasound, repairs and painting) and offering global management.
- 2. Honeycomb** with integral management, being leaders in the whole process.
- 3. Allcomposites**, a diversification line that offers integral management of UAV manufacturing, drones and turnkey carbon fibre projects.

Main activities

Composites: integral post-autoclave processes: CNC/Manual Machining of Fibre Reinforced Plastic (FRP) components (up to 5-Axis) / CNC/Manual Drilling of Composites and Composite/Metallic Assemblies (up to 5-Axis) / Repair of Carbon Fibre Composite material structures / Three-dimensional Measurement & Inspection (Nadcap accredited) / Ultrasonic Inspection Phased Array / Pulse Echo / CFRP Pulse Echo (Nadcap accredited) / Leak test for Sandwich Structures / Wettability test / Surface roughness measurement / Sealants mixture & application.

Honeycomb cores: metallic and non-metallic integral management: CNC/Manual honeycomb core machining (Nadcap Accredited) / Integral raw material management (Fibreglass, Aluminium, Aramid, Rohacell) / Complete product development (template/tooling design and manufacture, CNC programming, delivery ready for lay-up) / Creation of prototypes and specimens for testing in new developments.

Composites Integral Solutions (Allcomposites): Engineering Processes / OEM and ODM services / Structural repair services / On-fiber parts coating services / Painting and surface finishing services.

Tooling: Design and manufacture of tools.

Trescal

Trescal is the international expert (presence in more than 30 countries) in calibration, testing and metrology services.

Trusted by more than 60,000 customers across all industries to perform these critical and mandatory services. Stand out for a large number of ISO/IEC 17025 accreditations, Nadcap AMS 2750 and a comprehensive "one-stop-shop" service.

As a world leader, innovation and continuous improvement are present in Trescal's day to day. Every year Trescal invests a large part of the profit, in new capacities, laboratory renovations, automation, robots and training programs. Such investments guarantee Trescal's technical excellence.

4i has created a new generation dialog system that enables productive conversations between humans and machines. Its features make a difference:

- Voice and vision multimodal conversations. No rehashed chatbot engine, voice and vision are a premise, not an afterthought.
- Cloud-free deployment with full privacy, uploading no content to the cloud.
- Dialogs optimized for reliability. Factually correct, bias-free responses. Our Deep Learning models maximize performance and naturalness while minimizing the risk of inaccurate and inappropriate system outputs.
- Robust under uncertainty, noisy conditions, user disfluencies and other communication issues.
